

SIMPLIFYING
BUSINESS
PROCESSES

HELLO AND WELCOME

Every organisation,
regardless of sector
and size, strives
for efficiency and
optimum productivity.

The reality is, by using automated processes, organisations can save valuable time and money.

As an innovator and leader in our field, V1 has developed dynamic business automation software solutions to enable both public and private sector organisations to streamline their business processes.

Our recently expanded product suite includes:

Document management, professional services automation, project accounting, and training and learning management software.

We pride ourselves on our innovative solutions, personal and straightforward approach and dependable service.

V1 Document Management

We have created tailored document management and business automation solutions for finance, HR and payroll departments that can be integrated into all major accounting and ERP systems.

V1's expertise in document management and imaging can support your organisation by enabling:

- ▶ Document archiving
- ▶ Automated data capture
- ▶ Document authorisation
- ▶ Output management

Document management software or paperless office technology, replaces paper-based processes with electronic procedures, eliminating the printing, posting and manual filing of paper documents.

Our document management and imaging solutions will drive significant cost savings across your organisation. With a typical ROI of less than six months, our software is used by thousands of organisations in both the public and private sectors worldwide.

As well as making great business sense, our document management solutions support organisations' green agendas.

V1 Professional Services Automation

V1 Professional Services Automation (V1 PSA) is designed to improve the performance and profitability of people and projects in consulting and professional services organisations.

V1 PSA supports and enhances the core business processes that underpin the successful management of both people and projects, enabling you to:

- ▶ Effectively schedule the right resources
- ▶ Accurately record time and expenses
- ▶ Ensure accurate, timely billing and recovery
- ▶ Recognise revenue based on your predefined rules
- ▶ Measure the financial performance of both projects and people

V1 PSA will ensure that you make important strategic business decisions rapidly and with confidence.

Organisations that employ a significant number of skilled and expensive professional staff must account for their time whether to charge clients or to justify costs internally.

Without accurate information on project status, billable hours and resource utilisation, the resulting loss of control will lead to dissatisfied clients and reduced profit margins.

Our PSA solution enables the collection of a wealth of information about client relationships, project performance, project profitability, resource skills and utilisation.

V1 Learning & Training Management

Designed for companies and organisations to manage public, onsite and in-house training, as well as online learning and development, V1 Learning and Training Management (V1 LTM) is the solution of choice for major training and learning providers.

V1 LTM supports all of your key business processes and learning strategies, offering you:

- ▶ Highly scalable back office and online functionality which supports the management of learning and training to multiple stakeholder groups
- ▶ Rapid implementation and multiple integration options at an affordable cost of ownership
- ▶ Specialist modules include visual scheduling and clash checking to efficiently manage the most complex training and learning requirements

As the system of choice for leading training providers, V1 LTM is a flexible and customisable web based application with unrivalled product features which will reduce costs and transform your learning and training management.

V1 LTM combines powerful CRM and marketing functionality with everything you need to manage and deliver training, learning and development.

YOUR EXPERIENCE

We know that great relationships thrive on honest and open ways of working. We use the following approach to outline how we will work with you.

Discuss

In our discussions with you we will be seeking to find out whether we can solve the challenges you face in your organisation and how we can work together to improve your business processes.

Scope

It is really important we grasp a thorough understanding of your objectives and the scope of work.

It's now time to start homing in on your existing processes.

Consider

In this phase of the cycle, we will focus on the way you operate, and give consideration to your existing processes.

We will also start to think about how we will apply our technology to create the best solution to meet your needs.

Solve

We will create a proposal for you, which is likely to be accompanied by a demonstration of the solution.

We take a collaborative approach and will assist you by presenting a business case to communicate the return-on-investment.

Action

If you decide you would like to invest in our solutions, you will start to see the benefits in your business processes.

With a seamless customer journey, we're with you every step of the way to review your situation and ensure you have a first class experience with us.

OUR CLIENTS

We have the pleasure of working with people and businesses that share our passion for saving time, space and money.
